What is IoT

What is IoT

- ▶ Not “a computer connected to the internet”
 - ▶ Then it is really just another computer connected to the internet
- ▶ Must be something else
 - ▶ It is simply devices that are resource constrained
 - ▶ Usually in more than one way
- ▶ Autonomous operation, the connection might not be permanent

IoT is just a concept

- ▶ *The Internet of Things (IoT) is the network of physical devices, vehicles, home appliances and other items embedded with electronics, software, sensors, actuators, and connectivity which enables these objects to connect and exchange data.*¹

Lecture: MQTT

MQTT

- ▶ *Message Queuing Telemetry Transport*
- ▶ [Wikipedia: MQTT](#)

MQTT - The protocol

Agents have one of two roles:

- ▶ *Client*
 - ▶ Publishes *messages*
 - ▶ Subscribes / unsubscribes to *topics*
- ▶ *Broker* (aka Server)
 - ▶ Handles network connections
 - ▶ Keeps subscriptions
 - ▶ Manages client
 - ▶ Disconnects
 - ▶ *(last) will*
 - ▶ Persistence of retained messages

MQTT - The protocol - MQTT Topic

- ▶ Topic name: `foo/bar/baz`
- ▶ Topic filter
 - ▶ `foo/bar/?`
 - ▶ `foo/#`

MQTT - The protocol - MQTT Topic

The temperature sensor:

- ▶ Publishes on:
 - ▶ myapp/\$device-id/temperature
 - ▶ myapp/\$device-id/humidity
 - ▶ myapp/\$device-id/alert
- ▶ Subscribes to:
 - ▶ myapp/\$device-id/command

The central application:

- ▶ Subscribes to:
 - ▶ myapp/#/temperature
 - ▶ myapp/#/humidity
- ▶ Publishes on:
 - ▶ myapp/\$device-id/command

MQTT - The protocol - MQTT Packet

- ▶ Size oriented
- ▶ Flags indicate type of remaining bytes
 - ▶ Packet type
 - ▶ Topic name
 - ▶ Payload

MQTT - The protocol - MQTT Topic - more

Enten må den holdes rett etter “## MQTT - The protocol - MQTT Topic”
ellers kanskje flyttes etter “patterns”.

The central application is split:

- ▶ An aggregating agent:
 - ▶ myapp/#/temperature
 - ▶ myapp/#/humidity
- ▶ Emailing agent
 - ▶ myapp/\$device-id/alertert
- ▶ Publishes on:
 - ▶ myapp/\$device-id/command

MQTT - The protocol - Retained message

Message is kept by the server even after disconnect

- ▶ CONNECT
- ▶ PUBLISH
 - ▶ RETAIN
 - ▶ \$app/\$device/temperature
 - ▶ 22.3
- ▶ DISCONNECT

Later on:

- ▶ SUBSCRIBE
 - ▶ \$app/#/temperature
- ▶ PUBLISH
 - ▶ \$app/\$device/temperature
 - ▶ 22.3

MQTT - The protocol - Will message

Message sent when you disconnect

Client #1:

1. CONNECT

- ▶ WILL TOPIC: \$app/\$device/online
- ▶ WILL PAYLOAD: 0

2. PUBLISH

- ▶ \$app/\$device/online
- ▶ 1

3. DISCONNECT

Broker

1. *To all subscribers* PUBLISH

- ▶ \$app/\$device/online
- ▶ 0

MQTT - Patterns

Må utvides

Explain:

- ▶ Push vs pull, central applications can push to clients
- ▶ mostly mqtt, some http
- ▶ Client id - sparker ut gamle koblinger
- ▶ Keep alive / ping meldinger
- ▶ Alternative transporter - websockets(!)

MQTT - Implementations

- ▶ Mosquitto
- ▶ Eclipse Paho
- ▶ RabbitMQ
- ▶ ActiveMQ

MQTT Cloud Connectors

- ▶ Cloud
 - ▶ Amazon IoT
 - ▶ Google Cloud IoT
 - ▶ Microsoft Azure IoT
 - ▶ CloudMQTT (at Heroku)
- ▶ DIY
 - ▶ ThingMQ
 - ▶ HiveMQ

Assignments

Assignment 1: Blink a led

Assignment 2: Connect to Wi-Fi

Assignment 3: Connect to MQTT broker

Assignment 4: Network play time

- ▶ Measure round trip time/latency. Measure UDP, TCP. Measure when the packet size is greater than the MTU
- ▶ Notice variations in RTT
